New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, failure and angina. 2004-268788/25 WPI; 2004-268788/ P-PSDB; ADL14161 

Claim 1; SEQ ID NO 43; 139pp; English

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 21970, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecule (I) comprising any one of 40 nucleotide sequences (I). The nucleic acid molecules and colypeptides are useful for diagnosing and treating a subject having a disorder, which is associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, 27903, 3700, 21529, 26176, 26344, 55053, 2504, 15977, 14760, 25501, 26343, 38555 or 593 activity, such as cellular proliferative and/or disorders, colon disorders, kidney (renal) disorders, prostate disorders, prostate disorders, prostate disorders, prostate disorders, testes disorders, canorders, canorders, prostate disorders, testes disorders, canorders, canorders, canorders, pancreatic disorders, pancreatic disorders, disorders, disorders, skeletal muscle disorders, disorders, disorders, cardiovascular disorders, pancreatic disorders, real disorders, canorders, canorders, pain disorders, disorders, cardiovascular disorders, pain disorders, disorders, cardiovascular disorders, canorders, art failure, hypertension, angiogenic disorders, are also useful as modulating agents in regulating a variety of cellular process, e.g. cell proliferation, differentiation, growth and division. This sequence encodes a novel human protein of the invention. Plactronic forms. ftp.seqdata.uspto.gov/sequence.html?DocID=20040058355 electronic format

A composition associated with decreased expression of treating a disease or condition associated with decreased expression of PKIN and a composition associated with decreased expression of a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The construction of a disease or condition associated with overexpression of PKIN. The construction of a disease or condition associated with overexpression of PKIN. The construction of a disease or condition of a disease or disorder include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, mysloma, patterness and the construction of a disease, alterness of a disease, alterness of a disease, and the construction of a disease, and a development disorders (arteriosclerosis, sporiasis, hepatitis, construction of a disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease, and disease,
                                                                                                                                                                                                  New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2

P-PSDB; AAM93360.	830 Primers useful for synthesiz in genetic manipulation.			CC libraries that were synthesised by the oligo-capping method. The primers CC enable the production of the full length cDNA easily without any special CC enable. The present sequence is a full length human cDNA of the CC invention. Note: The sequence data for this patent did not form part of CC the printed specification, but was obtained in CD-ROM format directly	CC from BPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                     à
                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    346
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             211

```
screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, extation and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antifilammatory activities. This polynucleotide sequence is a human kinase DNA sequence

```

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes

(first entry)

```
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, in diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     226

The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing blodiversity. The present sequence represents a novel human arginine-rich protein cDNA. New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and ID NO 215; 51pp; English 2004-238579/22 Disclosure, SEQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence encodes a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      346

in the formation, differentiation and maintenance of multicellular corganisments proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisme. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors are paramaceutical and diagnostic agents, such and receptors of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic activities through the stimulation of chondrocytes. The nucleic activities through the tumour in a mammal: In-addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method (M1) for determining the subtype of leukaemia cells and whether a patient sample contains leukaemia cells. The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining the subtype of leukemia cells and whether a patient sample contains leukemia cells or other cells, useful for treating leukemia, comprises determining the expression profile of a group of markers in a

                                                                                                                                                                                                    The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogram's syndrome, vasculitis, sarchritis, systemic haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polynucleotide of

On Nov 15, 2002 this sequence version replaced gi:23269681.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/xat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the serimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Morley, K.C.

                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
